BEER BASICS - TROUBLESHOOTING INFO

When you're expecting a full-bodied brew, a foamy or flat beer just won't do. If you experience excessive foam or no foam at all, chances are there is a quick and easy fix that will get you back to pouring the perfect beer in no time. Below are some of the most common beer dispenser problems and their solutions.

PROBLEM: No beer is coming out of the tap

- **Check the gauge** to see if there is any pressure showing. It should read between 10-12 lbs. If not, your CO2 tank may be empty.
- **Is the shut-off valve in the vertical (on) position?**
Note: Diagram shows the valve in the off position (horizontal).

PROBLEM: Flat beer

- **Check the gauge.** Is the pressure between 10-12 lbs? If not, turn the pressure up to its appropriate level. Low pressure can cause beer to flatten and pour slowly.
- **Dirty glassware will cause the head on a beer to quickly disappear.** Make sure your glassware is free of impurities before pouring.

PROBLEM: Foamy beer

- **Check the gauge.** Is the pressure between 10-12 lbs? If not, turn the pressure down to its appropriate level. Pressure that is too high can cause beer to overcarbonate in the keg and pour foamy.
- **Is the unit plugged in and cold?** Is the keg cold or, if purchased at room temperature, has it been in the dispenser for at least 24 hours? Attempting to tap a warm keg in a refrigerated unit will cause excessive foaming. Keep the temperature in the unit 36°-42°F, and make sure the keg is properly chilled before tapping.
- **Have you cleaned the equipment lately?** Regular cleaning of the system - from faucet to keg coupler - is important to keep beer stone, bacteria, and mold from building up. The factors listed above can quickly ruin a perfect brew!

36°-42°F
